**SOURCE CODE :**

**inline_css.html**

```html
<!DOCTYPE html>
<html lang="en">
<head>
   <meta charset="UTF-8">
   <meta name="viewport" content="width=device-width, initial-scale=1.0">
   <title>Inline CSS Example</title>
   <style>
      body {
         background-image: url('background.jpg');
         background-size: cover;
         background-repeat: no-repeat;
         text-align: center;
         color: white;
         font-family: Arial, sans-serif;
      }
   </style>
</head>
<body>
   <h1 style="color: yellow; margin-top: 50px;">Hello, Inline CSS!</h1>
   <p style="background-color: rgba(0, 0, 0, 0.5); padding: 20px; display: inline-block;">
```

Inline CSS allows you to apply styles directly within HTML elements    using the <code>style</code> attribute.

It's useful for quick changes or single elements, but it can become cumbersome for larger projects.

```
    </p>
</body>
</html>
```

**internal_css.html**

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Internal CSS Example</title>
  <style>
    body {
      background-image: url('background.jpg');
      background-size: cover;
      background-repeat: no-repeat;
      text-align: center;
      color: white;
      font-family: Arial, sans-serif;
    }
    h1 {
      color: yellow;
      margin-top: 50px;
```

```
        }
    p {
        background-color: rgba(0, 0, 0, 0.5);
        padding: 20px;
        display: inline-block;
    }
    </style>
</head>
<body>
    <h1>Hello, Internal CSS!</h1>
    <p>
        Internal CSS allows you to define styles within the
        <code>&lt;style&gt;</code> tag inside the HTML document's
        <code>&lt;head&gt;</code> section.
        This method is useful for applying styles to a single document and
        keeps the styles centralized.
    </p>
</body>
</html>
```

**external_css.html**

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-
        scale=1.0">
    <title>External CSS Example</title>
    <link rel="stylesheet" href="styles.css">
```

```
</head>
<body>
    <h1>Hello, External CSS!</h1>
    <p>
        External CSS involves linking an HTML document to an external
        stylesheet using the <code>&lt;link&gt;</code> element.
        This method allows you to apply styles to multiple pages, ensuring
        consistency and easier maintenance.
    </p>
</body>
</html>
```

**styles.css**

```
body {
    background-image: url('background.jpg');
    background-size: cover;
    background-repeat: no-repeat;
    text-align: center;
    color: white;
    font-family: Arial, sans-serif;
}
h1 {
    color: yellow;
    margin-top: 50px;
}p {
    background-color: rgba(0, 0, 0, 0.5);
    padding: 20px;
    display: inline-block;
}
```
